

Clear Range

The next person can have the wrong fact, or none.

A public-health and animal-health environment where relief, authorization, reporting, matching, publication, and unknown status each block a different decision.

THE OPERATIONAL REALITY

Command can change shift without passing ownership. A team can be ready and still lack authority. A laboratory can hold a result the investigator does not have. Feeds can refuse to become one picture. A public page can lag a decision already made. An empty disease status can be treated as if it were clear.

WHAT V8Y IS BEING TESTED ON

V8Y must say which of those is true, who may act, and whether the next decision uses the governing fact — including refusing to invent a status that was never established.

AVAILABLE THREADS

The Relief

The shift changed. The next period cannot say who owns the open work.

The Gate

Responders are ready. The gated action is not authorized.

The Field Delay

The laboratory has the result. The investigator does not.

The Map

The feeds are up. They still do not make one usable picture.

The Stale Record

The decision changed. The public status people are using did not.

The Unknown Status

Animals are moving. The required disease status was never established.

THE MISSION PROOF

A sent message, a faster test, a prettier map, or a filled-in blank is not success. The next owner, the authorization, the receipt, the matched picture, the published status, or an explicit unknown has to be what the decision uses.

WHERE THIS APPLIES

Emergency managers, animal-health authorities, public-health surveillance, and officials who publish status people will act on. All six Clear Range threads are demonstration scenarios. They are not yet live demos.

Request a Clear Range demonstration

V8Y is at TRL 5. Matured through mission demonstrations and prototype environments.

TSM Awardable. Acquisition context, not a validation of these results.
